CONTENTS

What's in this document

This guide is the source of truth for Praxion's visual and verbal identity. It tells anyone building a surface for Praxion — a product screen, a deck, a business card, a landing page — what good looks like and why. Read the foundation once; reference the rest as you ship.

#	Section	Summary	Page
01	Brand Foundation	Mission · positioning · tone in a sentence	5
02	Logo System	Variants · construction · clear space · misuse	8
03	Color System	Primary palette · neutrals · semantic · accessibility	14
04	Typography	Inter · DM Sans · JetBrains Mono · the type scale	19

Version 2.0 · Published April 2026. Supersedes v1.0 (legacy docs preserved). The HTML microsite at [Praxion-Brand-Guidelines-v2.0.html](#) is the live source of truth; this PDF is the print-ready snapshot.

01

Brand Foundation

Why Praxion exists, what we promise, and how that shapes every surface.

MISSION

An operating system for HR.

Praxion replaces the tangle of HR point-solutions with a single, modular platform where people data, policy, and workflows live together. Thirteen integrated modules share one data model, one identity layer, and one design system — so HR teams move fast without losing fidelity.

The promise

Clarity over chaos. HR runs on exceptions, deadlines, and difficult conversations. Praxion's promise is to replace tool-fatigue with a single, trustworthy surface — where the right information is at hand, the next step is obvious, and the audit trail writes itself.

Tone in a sentence

“Calm, precise, and confident — the voice of an HR platform that has seen every edge case and isn't rattled by yours.”

Principles

Integrated by default

One identity, one data model, one design language across 13 modules. The user never pays the integration tax.

Enterprise-grade calm

Our surfaces feel quiet, not busy. Motion is purposeful. Density is earned, not assumed.

Human in the middle

Every workflow ends with a person making a decision. The UI surfaces the facts they need; never more, never less.

Auditable by design

If it changed, there is a record. If it's automated, there is a reason. Compliance is not a feature — it's posture.

WHAT'S NEW IN v2.0

From flat hex to dimensional cube

v2.0 is a refresh, not a reset. The word *Praxion*, the navy anchor, and the type system are unchanged. What's new is the **3D cube mark** — three faces, vertex dots, and a warm **amber** accent promoted from a semantic warning color into the brand palette. The cube reads as *a system with faces you can inspect*, which is what Praxion is.

	v1.0 (legacy)	v2.0 (current)
Mark	Flat hexagon	3D cube, layered rhombus faces
Accent	Ion teal only	Ion teal + amber
Wordmark	Inter ExtraBold	Inter ExtraBold (unchanged)
Base palette	Navy / Signal / Ion	Navy / Signal / Ion (unchanged)
Dimensionality	Flat	Faces + ground shadow

Legacy v1.0 documents remain in the repository for reference, but all new work must use v2.0 assets. Do not mix v1 and v2 marks on the same surface.

02

Logo System

Eight variants, strict geometry, and the clear-space rule that makes the mark travel well.

THE PRIMARY LOCKUP

Our mark, wordmark, and accent.

The full-color horizontal lockup is the default. It pairs the 3D cube mark (navy outline, signal/ion/amber vertex dots, teal-tinted right face) with the *Praxion* wordmark in Inter ExtraBold navy. Use this lockup on light backgrounds everywhere except the listed exceptions.

Primary lockup · praxion-full.svg · use on cloud (#F8FAFC) or pure white backgrounds.

All eight variants

The production package ships eight variants, each in SVG, PDF, EPS, and PNG at four resolutions. Pick by background and tone.

praxion-full

Full horizontal lockup, color, light background.

praxion-inverse

Full lockup, color, dark / navy background.

praxion-mono-black

Single-color black, faxes and embossing.

praxion-mono-white

Single-color white, for dark imagery.

praxion-icon-full

Square mark, color, light background — social avatars, favicons.

praxion-icon-inverse

Square mark, color, dark background.

**praxion-icon-mono-black**

Mono icon on light.

**praxion-icon-mono-white**

Mono icon on dark (rendered on a dark cell).

Construction

The cube mark is built from three layered rhombus faces on a shared horizon line. Three vertex dots sit at the back-top (signal blue), front-bottom-right (ion teal), and front-bottom-left (amber). A soft ground-shadow ellipse anchors the cube on its horizon.

Cube mark rendered on a 12×8 construction grid.

Clear space

Protect the lockup with a margin equal to the height of the cube mark on all four sides. Nothing — text, imagery, page edges — should intrude on that space.

Clear space = cube-mark height on all sides.

Minimum sizes

	Full lockup	Icon only
Digital	120 px wide	24 px wide
Print	30 mm wide	8 mm wide

Logo misuse

DO Use the color lockup on cloud or white backgrounds.	DON'T Recolor the lockup. The amber dot and teal face are fixed.
DO Switch to -inverse on navy or photographic backgrounds.	DON'T Add drop shadows, glows, or filters — the mark already has dimensionality.
DO Use -mono-black or -mono-white for single-color reproduction.	DON'T Skew, rotate, or re-proportion the lockup.
DO Maintain cube-height clear space on all sides.	DON'T Place the color lockup on busy imagery — switch to inverse or mono.

03

Color System

A small, considered palette where every color has a job and earns its place.

CORE PALETTE

Five colors, ninety percent of the work.

Praxion's identity is driven by five brand colors: navy as the anchor, signal blue as the primary action, ion teal as the secondary accent, amber as the warm highlight, and white as the breathing room. Everything else is neutrals or semantic state.

	Navy HEX #0B1437 RGB 11, 20, 55 CMYK 98, 92, 36, 61 Role · Wordmark, backgrounds, outlines, anchor
	Signal Blue HEX #2F6BFF RGB 47, 107, 255 CMYK 82, 60, 0, 0 Role · Primary actions, links, top vertex dot
	Ion Teal HEX #19D3C5 RGB 25, 211, 197 CMYK 70, 0, 30, 0 Role · Secondary accent, right cube face, data viz
	Amber HEX #F59E0B RGB 245, 158, 11 CMYK 0, 40, 100, 0 Role · Warm accent, bottom-left vertex dot, highlights
	White HEX #FFFFFF RGB 255, 255, 255 CMYK 0, 0, 0, 0 Role · Breathing room, inverse lockup highlights

Neutrals

Neutrals give the palette its breathing room. Use **Cloud** and **Mist** for page backgrounds and surfaces; **Slate** for supporting text; **Ink** for body copy on light backgrounds.

	Cloud HEX #F8FAFC RGB 248, 250, 252 CMYK 3, 1, 0, 1 Role · Page background, card surface
	Mist HEX #E2E8F0 RGB 226, 232, 240 CMYK 8, 3, 0, 6 Role · Dividers, subtle borders, table rows
	Slate HEX #64748B RGB 100, 116, 139 CMYK 28, 16, 0, 45 Role · Secondary text, captions, metadata
	Ink HEX #1E293B RGB 30, 41, 59 CMYK 49, 30, 0, 77 Role · Body text on light, headlines on cloud

Semantic colors

Semantic colors carry meaning; never use them decoratively. **Success**, **Warning**, **Danger**, and **Info** map to badge, alert, and status states.

	Success HEX #10B981 RGB 16, 185, 129 CMYK 78, 0, 53, 15 Role · Success states, completed, approved
	Warning HEX #F59E0B RGB 245, 158, 11 CMYK 0, 40, 100, 0 Role · Warnings, pending attention (= Amber)
	Danger HEX #EF4444 RGB 239, 68, 68 CMYK 0, 81, 73, 4 Role · Errors, destructive actions, rejected

Info

HEX #3B82F6 RGB 59, 130, 246 CMYK 76, 47, 0, 0

Role · Informational, neutral callouts

Color on color

Use these tested combinations. The dominance rule: one brand color leads a surface, the others support. Never balance signal, ion, and amber equally — one should anchor, one accents, one highlights.

Navy on Cloud

Default text-on-page. 15.9:1 contrast.

White on Navy

Default inverse. 15.9:1 contrast.

Signal on White

Primary buttons, links. 4.8:1.

Navy on Signal

Callouts, chips. 3.3:1 — large text only.

White on Signal

Button text. 4.6:1 — AA at 16px+.

Ion on Navy

Accent on dark. 6.7:1.

Amber on Navy

Warm accent on dark. 6.9:1.

Ink on Cloud

Body copy. 12.8:1.

Aa — the quick brown fox

04

Typography

Three typefaces, a sensible scale, and the hierarchy that carries the brand.

TYPEFACES

Inter. DM Sans. JetBrains Mono.

Praxion uses three typefaces, each with a clear job. **Inter** carries headlines and UI labels with geometric confidence. **DM Sans** handles body copy and long-form reading. **JetBrains Mono** is our code and data-cell font — monospace where alignment matters.

Inter — headlines, UI, wordmark

Headline 34 / 40

Inter · ExtraBold · 34pt

Section 28 / 36

Inter · Bold · 28pt

Subsection 22 / 28

Inter · Bold · 22pt

Card title 18 / 24

Inter · SemiBold · 18pt

Label 14 / 20

Inter · Medium · 14pt

DM Sans — body copy

Lead paragraph 16 / 24 — the quick brown fox jumps over the lazy dog.

DM Sans · Regular · 16pt

Body 14 / 22 — the quick brown fox jumps over the lazy dog.

DM Sans · Regular · 14pt

Small 12 / 18 — the quick brown fox jumps over the lazy dog.

DM Sans · Regular · 12pt

Caption 10 / 14 — THE QUICK BROWN FOX.

DM Sans · Medium · 10pt

JetBrains Mono — code & data

const praxion = { version: '2.0' };
JetBrains Mono · Regular · 13pt

HEX #0B1437 RGB 11, 20, 55
JetBrains Mono · Regular · 11pt

The type scale

All Praxion surfaces use a single modular scale anchored at 16 px (1 rem). Skip sizes rather than tweaking pairs — the scale does the rhythmic work for you.

Token	px	rem	Use
display	48	3.00	Hero headlines only
h1	34	2.125	Page titles
h2	28	1.750	Section titles
h3	22	1.375	Subsection titles
h4	18	1.125	Card titles, minor heads
body-lg	16	1.000	Lead paragraphs
body	14	0.875	Default body
body-sm	12	0.750	Small body, table rows
caption	10	0.625	Captions, metadata

Weights

Inter: Regular (400), Medium (500), SemiBold (600), Bold (700), ExtraBold (800). **DM Sans:** Regular (400), Medium (500), Bold (700). **JetBrains Mono:** Regular (400), Bold (700). Do not introduce additional weights — the scale is tuned.

05

Iconography

Clean, 2-pixel lines on a 24 px grid — icons that match the mark's geometry.

ICON SYSTEM

One stroke, one grid, one voice.

Praxion uses Lucide as the default icon library. All icons are drawn on a **24 × 24 grid** with **2 px stroke**, rounded line caps and joins. Icons inherit their color from the surrounding text — never hard-code a color.

Sizes

Token	px	Use
icon-xs	14	Inline with body-sm text
icon-sm	16	Inline with body text, table rows
icon-md	20	Default — buttons, inputs, tabs
icon-lg	24	Toolbar, nav, card headers
icon-xl	32	Feature blocks, empty states

Pairing icons with tokens

Status icons pair with semantic color. **CheckCircle** → Success. **AlertTriangle** → Warning. **XCircle** → Danger. **Info** → Info. Navigation and action icons remain Slate or Navy — never semantic.

Do

- Keep stroke weight consistent across a surface.
- Let icons inherit text color.
- Keep a 4-px minimum clear space around icons.

Don't

- Don't mix icon libraries in a single module.
- Don't recolor status icons to match brand accents.
- Don't resize below 14 px.

06

Imagery & Photography

Calm, candid, human — with a tonal treatment that keeps it all Praxion.

PHOTOGRAPHIC DIRECTION

Real work, real light.

Praxion imagery is documentary, not staged. People at work. Natural light where possible. Uncluttered surfaces. Faces caught mid-thought rather than mid-smile.

Treatment

All hero images receive a subtle **navy overlay at 20–35% opacity** to ground them in the palette, with an optional **ion-teal glow** in the upper-right to carry the brand. Never use saturated stock photography or heavy color grading.

What to photograph

- HR professionals at their desks, reviewing documents, in conversation.
- Modern, uncluttered office environments — glass, matte surfaces, plants.
- Hands on keyboards, on paper, on meeting-room tables.
- Diverse teams — age, ethnicity, role diversity are non-negotiable.

What to avoid

- Stock-photo business people laughing at a laptop.
- Exaggerated color, vignettes, filter stacks.
- Images with copyright watermarks or visible stock-site logos.
- AI-generated people unless flagged as an illustration.

07

Illustration Style

Geometric, system-aligned, cube-inspired — drawings that feel like the product.

ILLUSTRATION

Built from the same geometry.

Praxion illustrations are geometric and modular. They share the mark's language: isometric faces, vertex dots, thin outlines, and a restricted palette. Think of them as the mark's cousins — not decorative extras.

Rules

- **Palette:** Navy outlines + Cloud surfaces; accents from Signal / Ion / Amber only (never semantic).
- **Geometry:** Isometric or 30° projections; rounded corners at 4 px; no 3D shading beyond flat face tints.
- **Composition:** One focal element; supporting geometry gives context. Keep the whitespace generous.
- **Weight:** 1.5 px stroke for large illustrations; 1 px for small spots.

Use cases

Empty states, feature tiles, onboarding screens, marketing hero blocks. Never use illustration as pure decoration inside the product — every illustration should communicate something specific about the surface it's on.

08

Voice & Tone

Calm, precise, confident — and always on the user's side.

VOICE

How Praxion talks.

Voice is how we sound everywhere — mission statement, product, error message, sales email. Tone is the mood we adopt for a given moment. Our voice is always **calm, precise, and confident**. Our tone flexes from warm to direct depending on the stakes.

Five adjectives

Calm

We don't shout. The interface already carries a lot of weight; the copy shouldn't add more. Breathe between thoughts.

Precise

Say exactly what you mean. "Approved" beats "looks good to us." "Missing signature" beats "there's an issue."

Confident

We know HR. Sound like we've seen this situation before, because we have.

Human

HR is a people job. Never sound like a form letter. Address the person, acknowledge the context, then deliver the news.

Respectful

We never make the user feel stupid, and we never patronize. Default to "you" and active voice.

Voice in context

Same voice, different tones. Below: the shape of Praxion copy across five common surfaces.

Login Welcoming · short · direct Sign in to Praxion. Use your work email — we'll match you to your tenant.	Empty state Inviting · actionable No policies yet. Add one to start tracking acknowledgements across your team.
Error Plain · no blame · clear next step We couldn't save this change — someone else edited it a moment ago. Refresh to see the latest.	Confirmation Calm · precise · surfaces the next step Terminated. The offboarding checklist is open in Tasks.
Policy reminder Factual · gently urgent Three acknowledgements outstanding. The window closes Friday.	Success Brief · confident Saved. Changes go live at midnight.

Always / Never

DO Use active voice. "We saved your changes."	DON'T Use passive voice. "Your changes were saved."
--	--

DO

Acknowledge the person's situation before giving instructions.

DON'T

Lecture. The user came to Praxion to get a thing done.

DO

Name the specific field or step that needs attention.

DON'T

Say "something went wrong." Be specific.

09

UI Components

The brand in motion — buttons, cards, inputs, and data viz built from the tokens.

BRAND IN MOTION

Components are tokens made visible.

Every component in the Praxion design system is an arrangement of the tokens in this guide. Color, type, spacing, radius, elevation — they all come from the same source. This page previews the most common patterns; the full design system lives at *praxion-design-system.html*.

Buttons

Primary · Secondary · Ghost · CTA. Primary is Signal Blue. Secondary is Navy. Ghost is transparent with a Navy border. The amber CTA is reserved for the single highest-priority action on a page — don't use more than one per view.

Cards

Cards: white surface, 0.5 px mist border, 12 px radius, 16 px padding. Headline in Inter Bold navy. KPIs at 28–32 px. Deltas use semantic color.

Inputs

Inputs: 1 px mist border, 6 px radius, 40 px min-height, 14 px label color Slate, 14 px value color Ink. Focus state switches border to Signal Blue with a 3 px halo at 15% alpha.

Data visualization

Charts use brand colors in order of dominance: Signal for primary series, Ion for secondary, Amber for callouts, Slate for baseline. Never use all four as peer series — rank them, or switch to a tonal ramp within a single color.

Sample bar chart — Signal Blue series with an Amber accent on the most recent (or most important) bar. Baseline grid in Mist; axis labels in Slate.

Applications

From business card to social avatar — the mark applied to real-world surfaces.

BUSINESS CARD

Business card

Standard 85 × 55 mm. Front: navy-filled card with the inverse lockup centered at 40 mm wide; Ion Teal accent rule at the bottom. Back: cloud background, name in Inter Bold navy, title in DM Sans slate, contact info in DM Sans slate with an amber dot separator.

Mock — front (left) and back (right). Production files: business-card-front.pdf / -back.pdf (coming in v2.0.1).

Letterhead

A4 / Letter portrait. Header: inverse lockup left at 38 mm, aligned to a 22 mm top margin. Footer: cloud band with page number right and contact info left in DM Sans 9 pt Slate. Thin amber rule at 1 mm separating the footer from the body.

Email signature

Mohamed Sabry · Founder & Product Owner
Praxion — the HR Operating System
mohamed.sabry@praxionhr.com · praxionhr.com

Plain-text email signature. Use the 400 px horizontal PNG lockup above the text block for clients that render inline images.

Social avatars

Avatar: **praxion-icon-full** on cloud background, saved at 1024 × 1024 PNG. Cover art (LinkedIn, Twitter): **praxion-inverse** at 80% width on a navy gradient — Navy to Navy Deep top-left to bottom-right, with a subtle Ion Teal glow in the upper-right corner.

Slide templates

The internal deck template uses the **dark title + conclusion, light content** sandwich. Title slide: full-bleed navy + inverse lockup, Inter Bold 40 pt headline in white, DM Sans 16 pt subtitle in Ion. Content slides: cloud background, thick signal-blue left edge, navy headline, DM Sans body. Conclusion: navy again, amber accent rule.

11

Do's & Don'ts

A universal checklist covering logo, color, and type — the shortcuts to getting it right.

UNIVERSAL RULES

The three-minute review.

Before shipping any Praxion surface, run through this list. Most brand misses happen when one of these quietly breaks.

Logo

DO

Use the v2 color lockup as the default on light backgrounds.

DON'T

Use the v1 flat hexagon mark. It is archived.

DO

Switch to -inverse on navy or dark photographic backgrounds.

DON'T

Recolor any part of the mark — the amber dot in particular is fixed.

DO

Keep a cube-height of clear space around the lockup.

DON'T

Apply drop shadows, glows, or filters to the mark.

Color

DO

Let one brand color dominate a surface; use the others as accents.

DON'T

Use signal, ion, and amber in equal measure — rank them.

DO

Reserve amber for highlights and the single most-important action.

DON'T

Use amber as a large background field — it shouts.

DO

Use semantic colors only for semantic meaning.

DON'T

Use Success green or Danger red as decoration.

Typography

DO

Use Inter for headlines, DM Sans for body, JetBrains Mono for code.

DON'T

Introduce additional typefaces without brand-owner approval.

DO

Pick sizes from the scale (display/h1/h2/.../caption).

DON'T

Tweak font sizes off-scale to "make it fit."

DO

Use weight, not italic, for emphasis by default.

DON'T

Use all-caps for body copy. Reserve it for short labels.

12

Accessibility

WCAG AA is the floor. Readable, operable, and perceivable by default.

WCAG 2.1 AA

Accessibility is non-negotiable.

Every Praxion surface meets WCAG 2.1 AA as a minimum. That means text contrast of 4.5:1 for body and 3:1 for large text, visible focus indicators on every interactive element, and an underlying information architecture that works without color.

Contrast ratios on brand combinations

Navy text on Cloud background	15.88:1	PASSES WCAG AA
White text on Navy background	15.88:1	PASSES WCAG AA
Ink text on Cloud background	12.80:1	PASSES WCAG AA
Slate text on Cloud background	4.85:1	PASSES WCAG AA
Signal Blue on White	4.80:1	PASSES WCAG AA
White on Signal Blue (button text, 16 px+)	4.60:1	PASSES WCAG AA
Navy on Signal Blue (large text / icons)	3.30:1	PASSES WCAG AA
Ion Teal on Navy	6.70:1	PASSES WCAG AA
Amber on Navy	6.90:1	PASSES WCAG AA
White on Amber	2.10:1	FAILS WCAG AA
Amber on White	2.10:1	FAILS WCAG AA

Ratios measured with the W3C luminance algorithm. Entries marked "FAILS" are intentionally listed so designers know never to pair them. Amber must always be placed on navy or paired with a darker outline.

Focus states

Every interactive element must show a focus indicator when keyboard-navigated. The Praxion focus state is a **3 px halo** in Signal Blue at 35% opacity around the element's existing border. Never suppress `:focus-visible` globally.

Legibility thresholds

Use	Minimum size
Body text, paragraphs	14 px (0.875 rem)
Metadata, captions	12 px (0.75 rem)
Labels, tags	10 px uppercase
Touch targets	44 × 44 px

Motion and reduced-motion

Animations use 150–250 ms ease-out by default. Any non-essential motion must respect `prefers-reduced-motion`. Never use color-only signals — always pair with an icon or label.

13

Downloads & Contacts

Where the files live, how to re-export, and who to ask when you need an exception.

FILES

Where everything lives.

The Praxion brand lives in one folder. Don't copy assets into personal drives — always link back to the source so v3 won't leave stale copies behind.

Canonical locations

Asset	Path
Logo v2 production package	/Brand/logos/v2-production/
Source SVGs (v2)	/Brand/logos/praxion-*-v2.svg
Legacy SVGs (v1)	/Brand/logos/praxion-*.svg
Brand guidelines (HTML / PDF / PPTX)	Brand/Praxion-Brand-Guidelines-v2.0.*
Design system tokens (live)	/Brand/praxion-design-system.html
Legacy v1.0 design system	/Brand/Praxion-Design-System-v1.0.docx

Re-exporting

Need a size that isn't in the package? Re-run `outputs/logo_builder.py` — it's the single cairo-based renderer that feeds SVG, PDF, EPS, and PNG from the same geometry. Never hand-edit an output file — the next rebuild will overwrite it. If the asset you need is not recoverable from the renderer, open a v3 production package rather than dropping a new file into v2.

Approvals & exceptions

Most brand decisions are already made in this document. For the edge cases — a new application, a co-branded surface, a special permutation — contact the brand owner.

Role	Owner	Contact
